Dated: October 29th, 2018

Honorable Sir,

The artificial intelligence revolution is here which will completely transform societies. The Naya Pakistan vision requires us be at the forefront of this transformation. To make this possible under your leadership, we first need to train 100,000 Pakistanis in AI, data sciences, and information technology. Not only will it alleviate the unemployment issue in our educated youth and workforce, it will also boost the economy of Pakistan with all the benefits from the application of AI technology in sectors of the economy such as agriculture, finance, healthcare, education, and so much more.

Over the past eighteen years, our team has been working tirelessly to educate Pakistani citizens in the latest state of the art technologies. Our platform is already responsible for the training of thousands of students all across Pakistan. We also have the most highly qualified teaching team in place and are ready to respond to this national need. Once a decision has been made, we can launch the program immediately.

One option to consider is starting this mass training program for AI in the President House, the Prime Minister House, the Governor Houses of Sindh, Punjab, KPK and Balochistan, and all the Universities in Pakistan immediately under your leadership. Training sessions will be broadcast live from Karachi. For admissions in the program, the entry test may have to be conducted in stadiums all over the country with over a million participants.

We are already teaching thousands with the help of NGO's like Saylani and major universities of Pakistan. Now we wish to take this program to the national level with your support.

Therefore, we suggest that the honorable President of Pakistan should advise the honorable Prime Minister of Pakistan to launch the *Presidential Initiative on Artificial intelligence (PIAI)* to get Pakistan ready for this new age.

Thanking you.

Yours Truly.
